

BLÜCHER® MULTI WATER TRAP

Water trap with built-in safety and comfort

- Water trap
- Odour stop
- Flooding safeguard

KEEPING UP THE FLOW

Water trap with 3 functions

- Water trap
- Odour stop
- Flooding safeguard

Description

The BLÜCHER multi water trap keeps unpleasant odours and sewer water out of your bathroom.

1. Water trap

The smooth surfaces and excellent self-cleansing properties provide exceptional hygiene. It is easy to install in BLÜCHER floor drains, available in stainless steel AISI 304 / EN1.4301.

2. Odour stop

Designed with a special sealing ring that closes the water trap when not in use. This prevents unpleasant sewer odours from leaking into the room if the water trap dries out.

3. Flooding safeguard

The special sealing ring closes the water trap if water rises from the sewer, which could happen during rainstorms or high sea levels. The self-closing mechanism prevents water from rising through the grating and onto the floor (the mechanism is not approved for use as a back flow valve).

Capacity

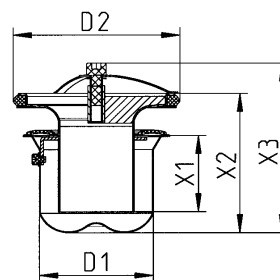

0,9 l/s.
